Two Eclipses this present yeere, 1595. The one, which is of the Moone, is on the. xiiii. day of Aprill, neare three a clocke in the morning. The other of the Sunne, which is on the. xvii. of September, a quarter of an houre before one a clocke at after noone.

Phisicke Notes.

uenient speede his violent griefe is to be appeased by this meane, vnlesse hymselfe be eyther so very sicke and weake, that he cannot possibly suffer it, or els the Moone be in the signe that ruleth the part of the afflicted body, which shoulde be Phlebotomized.

Notes for the ministring of Purgations.

The tymes most conuenient to Purge with Electuaries, is when the Moone is placed in Cancer; with Potions, when she is placed in Scorpius; and with Pylles, when she is placed in Pisces; the body beyng before prepared, as is conuenient.

Touching mylde Purgations which worke gently, and Glysters, they may be ministred indifferently at all tymes without any great inconuenience.

But purge by Vomite, when the Moone abydeth in signo ruminanti, as namely in Aries, Taurus, or Capricorne.

Gargarismes are best vsed when the Moone is placed in Aries or in Cancer.

Lastly, as for the foure naturall Powers, seruing for nourishment: it woulde be noted, that the vertue Attractiue is best comforted, when the Moone is in a fyery Signe, as in Aries, Leo, or Sagittarius: the vertue Retentiue, when the Moone is in an earthy Signe, as eyther in Taurus, Virgo, or Capricornus: the vertue Digestiue, when the Moone is in an ayery Signe, as in Gemini, Libra, or Aquarius: and the vertue Expulsiue, when the Moone is in a watry Signe, as in Cancer, Scorpius, or in Pisces.

Frende. 1595.

A Prognostication for this present yeere of our Lorde God.

M. D. XCV.

Wherein are playnely set downe the generall inclination of the ayre, and other perticuler accidentes, togeather with sundry notes and obseruations, drawen from the motions and configurations of the Planets, and other naturall causes, done according to lawfull Arte by

Gabriel Frende,
student in Astronomie.

Imprinted at London by Richarde Watkins and Iames Robertes.

Cum priuilegio Regiæ Maiestatis.

Of the diſpoſition and inclination of the foure Quarters of this yeere of our Lord and Sauiour Ieſus Chriſte.

1595.

Of the VVinter quarter.

VVInter according to our vſuall Engliſh accompt, beginneth at the tyme of the Sunnes ingreedience into Capricorne, which this yeere falleth vpon the xii. day of December laſt paſt: at what tyme was the Brumal Solſtice, or ſhorteſt day in the yeere, by reaſon of the Sunnes greateſt South declination from the Equinoctiall line: and continueth vntill the xi. day of March, at what tyme the Sunne entreth into the ſigne Aries. &c.

Concerning the generall inclination or affection of the ayre, I gather by artificiall circumſtances, that the principall qualities hereof will be colde and moyſt, of the nature of Water, and is compared to the flegmaticke complexion, the weſt winde, and olde age of man. This quarter will not much degenerate from his naturall inclination; which is to be very colde, with great froſtes and much ſnow, with very boyſterous wynders often aryſing, and dryuing the ſnow into heapes. Sicknesſes vſually raigning this quarter, are Agues of ſundry ſortes, Catharres, Coughes, Pluriſes, Apoſtumes, the Goute eſpecially, with Poſes and hoarſenes of voyce, the Toothach, and paynes about the Stomacke and Head. &c. Touching other affayres, as contenti-

tions, enuyings, quarrels, and troubles. I omit to write thereof, eyther in this Prognostication, or any other: beseeching Almighty God to auerte farre from vs, all those euylles wherby our sinnes and wickednesse deserue.

Of the Spring time of this yeere. 1595.

THis Spring tyme, being the seconde part of our common yeere, beginneth the. xi. day of March, at the entring of the Sunne into the first minute of Aries, at what tyme the day and nyght are of equall length in all places of the worlde. And this quarter continueth vntyll the. xii. day of June immediately folowing.

The naturall qualities of this tyme is, hot and moyst, resembling the qualitie of the ayre: the seruyng constellacion, and the first age of man [illegible] Concerning which tyme, I leaue the rules of Astrologie, that it shall not much dyffer from the proper kinde, charis, reasonable fayre and temperate, yeelding moist pleasant and comfortable shewers, to the norishing and happy encrease of the fruites of the earth.

The diseases which in this part of the yeere are most likely to molest, are aches in the ioyntes, Crampes in ỳ agen, Scabbes and Iech in chyldren, paynes in the Mydriffe and Lungues, Pauilles, Goutes, Byles, and other vnaccustomed diseases: wherefore my counsell is, to flee first vnto Almighty God, and beseech his diuine goodnes, that he vouchsafe to keepe vs his, in these, and all other calamities, whych mankinde are subiect vnto: and secondarily, to vse the counsell of the godly learned Phisition in due time.

Of

Of the Sommer quarter this yeere. 1595.

THis Sommer quarter beginneth, at the Sunnes entryng into the signe Cancer, which is this yeere the.xii. day of June: The day being then at the longest, and the nyght at the shortest: which season continueth vnto the.xii. day of September folowing. This part of the yeere is naturally hot and dry, and therefore likened vnto the fire, the cholericke complexion, the East winde, and the youthfull age of man. Now I gather by the present condition of the Starres and Planettes, and whole course of the Heauens, that the most part of this Quarter will fall out to be exceeding hot, yet sometime holsome shewers to asswadge the heate of the ground, to the comfort of the Husbandman, of thunder and lyghtning (in which Almighty God preserue vs) we are like to heare and see it in great measure.

The infirmities, which will most likely molest this Quarter, are Agues of sundry sortes, especiall the hot and burning Feuer, the heate whereof will driue many into extreame passions. Also Byles, Lasker, sorenes of eyes, paynes in the head and eares, fluxes of blood, fayntnes and sounding among the femall sex, and other distemperatures, very strange, and not vsually beyding in this season, causes sufficient to bidde mans inordinate course of lyfe, yf he enter into the due consideration thereof.

Of Autumne, or fal of the leafe. 1595.

THis Quarter, hath his beginning, when the Sunne entreth into the first min. of the signe Libra, which will be the.xiii. day of September, although it be placed in the Kalender the.xiii. day, for want of his due place, the day and night being

nowe againe of equall length, as they were in the beginning of the Spring, and this quarter hath his continuance vntyl the xxii. of December, where the Winter for the yeere. 1596. hath his beginning. This season, called Harueſt, Autumne. and fall of the Leafe, is by natures inclination cold and dry for the moſt part, and is aptly compared to the earth, the melancholike complexion, the Fourth wynde, and the middle age of man, that is from xl. yeeres vnto. lx. for then melancholy, which is colde and dry, as afore layde, is moſt encreaſed and augmented in him: which season by my calculation, shall be full of inconſtant weather, sometimes ouer warme, and sometimes boyſterous and windy, and otherwhyles colde and rainy. The ſickneſſes lykely to moleſt people in this quarter, are Conſumptions. Dropſies, Squinancies, the Mother paſſion, colde Feuers, Laſkes. Fluxes of blood, and others. In the which and all other diſeaſes, troubleſome to the fleſh, God graunt vs his holy ſpirite, to ſtrengthen our ſpirites, to the ſauing of our ſoules, through Ieſus Chriſt our onely ſauiour. Amen.

The

The opinion of Gabriel Frende, for the disposition of the weather, for euery day in this yeere of our Lord and Sauiour Iesus Christ. 1595.

Of the weather in Ianuarie.

The first day being Circumcision, a goodly frost. The.ii. day likely to snow or colde sleete. The.iii. and.iiii. dayes rayne. The.v. vi. and.viii. dayes, boysterous tempestious.

The first quarter the.viii. day.xxvi. min. after. iiii. of the clocke in the after noone, colde and frosty. The.ix.x. and.xi. dayes, geuen to raine. The.xii.xiii. and.xiiii. dayes, most part frosty, and some snow falling.

The full Moone the.xv. day, somewhat before.vi. a clocke at night, colde sleete or raine. The.xvi. and.xvii. dayes, moyst weather. The.xviii. and.xix. dayes, driuing snow. The.xx. and.xxi. dayes, rainy for the most part.

The last quarter the.xxii. day, three quarters of an houre after.xii. a clocke at noone, a fayre frost. The.xxiii. and.xxiiii. dayes, semblable weather. The.xxv. and.xxvi. dayes, geuen to raine. The.xxvii.xxviii. and.xxix. dayes, snow, and intermixt weather.

The new Moone the.xxx. day, somewhat before. vii. a clocke in the morning, and the.xxxi. day, colde moysture.

Of the weather in Februarie.

The. i. ii. and. iii. dayes, changeable weather with showe and raine. The.iiii.v. and. vi. dayes, frosty, with some colde raine.

The first quarter the.vii. day, a quarter of an houre before. xii. a
